

SUMMARY

Curious and quick to learn, I'm committed to mastering C++ and strong software design habits. I write code that's clean, easy to understand, and backed by basic unit tests, using repeatable workflows to ensure reliability. Right now, I'm building a portfolio of small, well-structured projects including game development prototypes to prove my skills in action. I'm eager to grow into Linux, tooling, and gameplay systems development, where I can contribute to impactful solutions while sharpening my craft.

TECHNICAL SKILLS

C++(intermediate) | OOP / OOD | STL | Boost(familiar) |
CMake(basic) | Unit testing (learning) | Perforce | Git |
UMTS/LTE (basic) | Linux(basics) | UE5 | Unity

PROFESSIONAL SKILLS

Problem solving | Debugging | Team collaboration | Jira
Agile teamwork & sprint delivery | Time management |
Technical communication | Project ownership

PROJECTS

TG 3SIXO - HackYeah Hackathon Project — Real-Time Traffic Simulation Backend

Dec 2025 - Dec 2025

C++ | JS/HTML | CMake | FastApl | Sept-Oct 2025

- Developed a predictive traffic engine combining live transit data, user reports, and AI forecasting.
- Implemented Dijkstra-based routing, real-time SSE updates, and delay prediction via TransitDNA.
- Built a user-facing map UI showing baseline vs. disrupted routes, ETA changes, and proactive alerts.
- Integrated calendar conflict detection, dispatcher API, and live GTFS data for realistic scenarios.

MiniDB — In-memory C++ database

Aug 2025 - Aug 2025

Tools: C++ | file I/O | REPL

- Implemented a tiny in-memory database with REPL supporting insert, select, and exit commands.
- Built command parsing and basic persistence to file to practice I/O and string parsing.
- Improved debugging, error handling and modular C++ code organization.

Gnome Splash - Local Multiplayer Game

Mar 2025 - Apr 2025

C++ | Unreal Engine

- Led multiplayer gameplay programming for a local split-screen PvP game, created damage, respawn, and player spawning systems.
- Developed UI and HUD features, like health bars, cooldowns, and menus.
- Optimized player experience by integrating enhanced input, dynamic spawn locations, and smooth match flow from menus to gameplay.

More Projects ↘

EDUCATION

Bachelor of Engineering in Computer Science

Aug 2020 - Jun 2024

Chandigarh University

Diploma (Game Programming)

Sep 2024 - Dec 2026

FutureGames

ADDITIONAL INFORMATION

- Languages:** English (Fluent) , Hindi (Native) , Gujarati (Native)
- Certifications:** Intermediate OOPS for Unity Games , Object-Oriented Data Structures in C++ , Cloud Virtualization , Containers and APIs
- Awards/Activities:** Organized a Hackathon in 2022 , Participated In Hackyeah2025
